

RACE PROGRAMME 2 OPTION 2

Mixed into Food	Week Day	In Drinking Water	
Turbobooster E-Powder Bloomford F-Vite & Grit	Saturday	Quik Gel drink for race & toss birds PM Triple X SulfaAVS Megamix	Smaller, more dry Sunday morning droppings tending to brown indicates a positive response. Triple X, Sulfa AVS & Megamix is repeated on Monday.
Turbobooster E-Powder Ve8 Powder Bloomford	Sunday	Triple X SulfaAVS Megamix	Sunday morning dropping check Larger, softer and some green droppings is a negative response. Although bloom may be present, these negative changes mean Race Programme 2 Option 3 should start on Sunday.
Turbobooster E-Powder Ve8 Powder Bloomford	Monday	Moxi-T Turbosole Megamix	Monday morning dropping check Smaller, dry Monday & Tuesday morning droppings showing a bright snow white capping indicates this programme should be repeated next week. Start Race Programme 2 Option 1 next week when droppings are larger.
F-Vite & picking stone in dish	Tuesday	AM - Moxi-T, Turbosole & Megamix PM - KD	Smaller, more dry Wednesday morning droppings indicates a positive response to KD and need to continue this programme next week.
PM - Remove F-Vite, grit & picking stone	Wednesday	Dufoplus Ioford Megamix	Final morning dropping check Green Wednesday morning droppings are a negative response to KD. This indicates the time to change to Race Programme 2 option 1 next week.
E-Powder in a dish	Thursday	Ioford Megamix	
E-Powder in a dish	Friday	Quik Gel	Top form droppings will miraculously appear on basket day when Wednesday to basket day health boosters are given.

Tuesday Treatments

KD is given Tuesday morning following a negative dropping response to Triple X Sulfa AVS Megamix. Otherwise S76, Carlox & GTwormer are given as a weekly rotation on Tuesday morning and KD is given every Tuesday afternoon.

S76 (5mls per 2 litres) is given one week, followed by GT wormer (5mls per 2 litres) the next. S76 or GT wormer (5mls per 4 litres) is added to the weekly bath water on alternate weeks.

Carlox is given once a month the Tuesday after GTwormer treatment. When coccidiosis is diagnosed, an initial dose of Carlox (2mls per litre) is given for 2 days. Carlox is then repeated each Tuesday morning for 3 additional weeks.

S76 & GTwormer are not given at this time but restart at the conclusion of this treatment.
