Turbobooster E-Powder Bloomford	Day 7	KD powder (half dose)

Ve8 Powder, Quik Gel & KD Treatment Plan

Ve8 Powder, Bloomford & Turbooster are added to the food & Quik Gel given in the drinking water for 2 days immediately the following changes appear:

- Abnormal droppings on floor or in nest
 - Lethargy in any breeding bird
- Failure of the parents to feed their babies to full capacity at each mealtime (especially babies between 10-20 days of age).

KD is then given for 1 day. The Booster Breeding Programme is continued for 1 week before returning to regular Breeding Programme.

Recovery of vitality and a return to healthy droppings will be seen by the 2nd day of Quik Gel and Ve8 Powder treatments.
